

MHM Film Positioning Unit

The film positioning unit **FPU** has been designed to enable **rapid pre-registration** of artwork to screens, resulting in faster set-up times for multi-colour jobs.

All types of screens including roller frames may be used and the bright 'LED' guides enable all film positives to be placed in exactly the same position on all screens. (Film positives may also be cut to size, reducing wastage and minimising film costs).

The **FPU** is a freestanding and does not interfere with the glass surface of the exposure unit allowing operators to prepare large numbers of screens without having to wait for the exposure unit to finish.

Finally, there is no need to use a pre-registration pallet when loading the screens into the press. All screens will simply "plug-in" to perfect registration using MHM's unique pin locators and the 'Zero-off' clicker style micro-registration system.

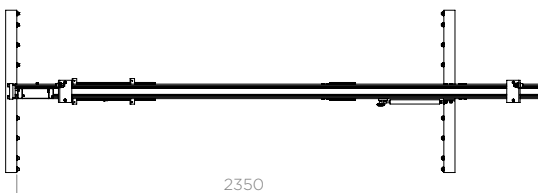

FEATURES AND BENEFITS

- Free-standing unit avoids tying up the glass surface of your exposure unit, streamlining your production of press-ready screens.
- Suitable for use with both conventional frames, roller frames and even wooden frames.
- Will accommodate various size screens.
- Built-in fine line, 'LED' guides for accurate positioning of artwork to screen.
- Press-ready screens may be loaded directly into the MHM press with little or no registration adjustment required.
- Permits the use of films which have been cut to the minimum size, greatly reducing wastage and overall film costs.
- Comes complete with pin-bar for precise positioning of registration pins to screens.
- Power: 350 W

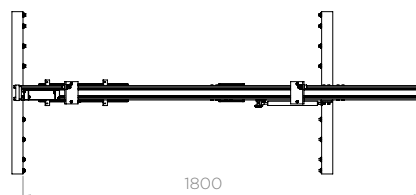

FPU XL

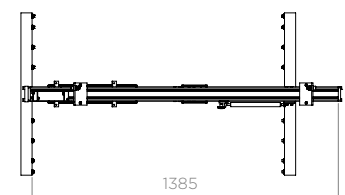

max. Screen Length: 2200mm / 86.6"
min. Screen Length: adjustable

FPU L

max. Screen Length: 1520mm / 59.8"
min. Screen Length: 750mm / 29.5"

FPU S

max. Screen Length: 1120mm / 44.1"
min. Screen Length: 500mm / 19.7"
